

Micro & Milli Gravimetric Dosing Systems

ATEX Certified

With our high precision gravimetric dosing systems, you can achieve fast and accurate dosing of free-flowing powders and granulates in explosive zones (II 2D/- III C 135 °C).

Self-optimizing

Our weighing software adjusts the frequency of the vibration feeder with a digital adaptive control algorithm. The parameters, such as flow behaviour and weight, are permanently checked and automatically adapted.

Highly Accurate

A high-resolution load cell in combination with a digital adaptive control algorithm creates the possibility of dosing tolerance between 0.5 and 1 % throughout the dosing range.

Model	Dosing (g)	Accuracy (%)	Time (s)
MD-2	0,400 - 2	0,5 - 1	5 - 15
MD-100	2 - 100	0,5 - 1	5 - 20

Your Specialist for Customised Weighing Solutions

With 30 years of experience in metrology, our team of experts provides weighing solutions tailored to your application. We are fully committed to the highest quality standards of our products and services. With a dedicated team focused on supporting our customers, we remain your partner during the whole product life cycle.
